

Country Bank Risk Dashboard

CEE country-risk comparison | 2024 snapshot

Composite Risk Scores

Rank	Country	Risk score
1	Ukraine	78.8
2	Romania	52.5
3	Austria	44.4
4	Hungary	40.7
5	Serbia	30.1
6	Poland	17.0

Latest Indicator Values

Country	Inflation %	Debt / GDP %	GDP growth %	Political stability
Ukraine	6.5	89.7	3.2	-0.43
Romania	5.7	57.5	0.9	0.16
Austria	2.9	79.2	-0.7	0.49
Hungary	3.7	73.5	0.7	0.44
Serbia	4.7	44.1	3.9	-0.17
Poland	3.8	55.1	3.0	0.50

Methodology

The model combines four indicators: inflation, general government gross debt, GDP growth, and Political Stability. Each indicator is min-max normalized across the six countries. GDP growth and Political Stability are inverted because higher values generally correspond to lower risk. The four components receive equal weights of 25%. The resulting score ranges from 0 to 100 within the selected sample, with higher values indicating higher relative risk.

Data sources: World Bank World Development Indicators (WDI), World Bank Worldwide Governance Indicators (WGI), and IMF World Economic Outlook (WEO) DataMapper.

Important: This score is a simplified comparative indicator, not an absolute probability of default or an official credit-risk assessment. Results depend on the selected countries, indicators, normalization method, and equal-weight assumption.
